Projects

Restaurant Finder, a worldwide restaurant explorer

- Search for a city and get cities suggestions in real-time
- After city is selected, restaurants are populated in map for the selected city after which user may choose to view more about the restaurant, photos, reviews, etc.
- Frontend built using React, Next.js
- Mapbox API was used to get city search suggestions and their geo-location
- Yelp API was used to get restaurants data

Driver Mobile App, a delivery driver app

- A cross platform React Native App ready to be powered by a backend
- Implemented react-native-maps, payment charts, navigation animation, etc.
- Design inspired by Caviar's driver app.

Recipe Web-Scraper, a recipe scraping backend

- A web-scraper written in JavaScript which scrapes from a few recipe website and outputs scraped data as json to an endpoint
- Used Express.js to create REST API and Cheerio for scraping.
